EDUCATION

Kennesaw State University – Kennesaw, GA

B.S. Software Engineering, Minor in Computer Science

Magna Cum Laude | GPA: 3.81 | Graduated: December 2025

Georgia Institute of Technology – Atlanta, GA ***M.S Computer Science***

Fall 2026- Present

RELEVANT SKILLS

- **Languages:** Java, Python, C#, Swift, JavaScript
- **Frameworks/Tools:** React, Django, Playwright, Postman, Git, GitHub
- **Databases/QA:** SQL, PostgreSQL, SQLite, test planning, regression testing, UAT, defect tracking
- **Other:** Excel, PowerPoint, Figma, Miro, basic API/auth concepts

WORK EXPERIENCE

General Devices – Software QA Engineer

2024 –2025

- Tested the CAREpoint Go mobile app through functional, regression, and usability testing to verify workflows and UI against requirements.
- Built/maintained test plans across features and real user scenarios to improve release coverage.
- Reported defects with clear repro steps, expected vs. actual results, and supporting evidence, then retested fixes while collaborating with developers and product on edge cases and QA documentation.

Marietta Tire Company – Web Developer

- Designed, built, deployed, and now maintain a responsive business website for a local tire and auto service shop using HTML, CSS, JavaScript, Netlify, and Twilio.
- Implemented quote and appointment request flows with email and SMS notifications using Netlify Forms, serverless functions, and third-party API integration.
- Managed production launch tasks including domain/DNS setup, mobile-friendly UX, business contact flows, and ongoing content/site updates.

PROJECTS

ReManned International – Sponsored Capstone Project

- Contributed to a sponsor-backed responsive web app prototype across frontend, backend, and SQL/database layers, translating sponsor feedback into requirements, wireframes, and validated features through sprint-based collaboration..

FlowCounts – Full-Stack Accounting Web App (Team Project)

Built a full-stack accounting web app with React, Django REST Framework, and PostgreSQL/SQLite, implementing core CRUD workflows, authentication/role-based access, audit logging, and team-based documentation/testing through GitHub.
